

NEW - UNIKON ECO-Modular

NEW - UNIKON ECO-Modular

The "NEW" ECO-Modular line; efficient and flexible!

Efficient:

Efficiency by using less water and energy is reducing operation costs. In the wash section all contamination is removed; the water in this section is continuously filtered to assure good wash quality. The crates are rinsed with clean water, this water is then re-used washing ensuring lower water usage. Lowering water consumption has effect on chemical and heating power usage. Optional pre-wash or drying sections can be added according tailored requirements.

Flexible:

Due to its modular concept it is easy to configure the best set-up for your requirements. Based on three main modules (pre-wash, main wash and blower module; available in different sizes) your configuration is easily made. Even in a later stage; when the machine is already in operation; it is possible to add modules to increase capacity, wash result or drying efficiency.

The advantages of the Unikon ECO-Modular are:

- Short delivery time
- Clip-nozzles, easy to adjust and easy to clean
- Low investment with high efficiency
- A-Brand parts, available worldwide
- Hygienic design
- Low maintenance costs
- Compact machine
- Easy to use
- Customizable

If you have any questions about this brochure or would like to have a conversation, we will of course be happy to hear from you.

UNIKON; your (customized) solution in cleaning and drying for more than 50 years!
